The Queen's Conference Center

The Queen's Conference Center is owned by The Queen's Medical Center and was constructed in 1941. Now, it's designated as an historic building with the State of Hawaii and the National Register of Historic Places. It originally housed an auditorium and offices for many medical societies and organizations. It was known then as the Mabel Smyth Memorial Building, named after the first woman of Hawaiian ancestry to receive her degree in public health nursing.

For over 60 years, this building served as a gathering place for medical professionals and organizations whose mission was to enhance health education and communication in the community. The building was extensively renovated in the year 2000 to improve and expand services for the current needs of Hawaii's medical community.

Now available for public health-related events and meetings, the center features the Mabel Smyth Auditorium, a teleconference room, and other conference rooms to accommodate a variety of meeting and audio/visual needs. Electronic Contracting provided audio/visual systems for the Mabel Smyth Auditorium, 2 large conference rooms, a boardroom, and a video teleconference room.

Systems Installed

- Audio/Visual
 - Digital AV Distribution & Management
 - Digital Signal Processors
 - Crestron Control System
 - Wireless Microphones
 - Video Conferencing
 - Video Production
 - Power Amplifiers
 - Video Displays

"I had a dream about the new system last night — on how to handle a new meeting scenario — which we could not perform with the old system."

— Michael Cornish Sr., Conference Center Engineer
